Use, Update or Remove the Ad Manager App

Ad Manager Essentials · https://support.jansma.vip/docs/jansma-vip-ads/ad-manager-essentials/use-update-or-remove-the-ad-manager-app/

The installed Ad Manager app uses the same account, permissions and information as the browser version. Installing it does not create a separate account.

Everyday use

- Launch the app from your operating system or home screen.
- Keep the device protected with a screen lock and do not share an active session.
- Use the account switcher only when you are authorised for more than one advertising account.
- Reconnect before relying on current statistics or saving changes.

Updates

Improvements are delivered through the web experience. Close and reopen the app to load the current version. If a screen remains outdated, sign out safely, close all Ad Manager windows and reopen the app. Clearing site data may sign you out and should be a last resort.

Remove the app

Use your operating system or browser app-management screen to uninstall the PWA. Removal deletes the local app shortcut and local site data; it does not delete your Jansma VIP account or campaign information.

If you use a shared device, sign out before closing or removing the app.
