Verify a Domain in Google Search Console

Domain Names · https://support.jansma.vip/docs/vip-hosting/domain-names/how-can-i-use-dns-to-verify-my-domain-with-google-search-console-webmaster-tools/

A DNS TXT record can verify control of an entire domain property in Google Search Console without changing website or mail routing.

Get the verification value

Add a Domain property in Google Search Console and copy the complete TXT value supplied by Google.

Add the TXT record

Open the authoritative DNS zone in Jansma VIP Hosting, create a TXT record at the root name and paste the value exactly. Do not remove unrelated TXT records.

Complete verification

Save the record, allow for DNS caching and select Verify in Search Console. Keep the record in place so ownership can be checked again later.

Need help?

If the result differs from the steps above, contact Jansma VIP Support with the domain or service involved and any non-sensitive error details. Do not send passwords or secret keys.
